Dear Colleagues,

The Epilepsy Center Frankfurt Rhine-Main accepts research fellows including international research fellows. Ideally you have already received some training in epilepsy and have a keen interest in epilepsy research.

In order to be able to talk to patients and interpret the source data quickly it is helpful to have some knowledge of the German language, for instance Goethe Level B I or C I language skills. We will provide access to relevant patient data, and support your research ideas or help you with developing research concepts and projects. You will have access to the clinical information system (KIS) and different data repositories with patient data and you will be provided workspace and adequate hard- and software to conduct your research.

If you are interested, you can also learn about Video-EEG-Monitoring and presurgical diagnosis of epilepsy in pediatric and adult patients and polysomnography in our accredited sleep lab (#10 DGSM).

Currently our second “Frankfurt University Epilepsy Research Fellow”, Dr. Isabelle Beuchat, a neurologist with some epilepsy training from Lausanne, is with us for a one year epilepsy fellowship, sponsored by the Swiss National Found.

Previously Dr. Asta Varnaité from Lithuania stayed with us for one year to conduct a research project on epilepsy surgery in MRI-negative patients.
If interested to spend a year or two with us, please apply to Prof. Dr. Felix Rosenow, Director of the epilepsy center under rosenow@med.uni-frankfurt.de.

We are looking forward to communicating with you.

Felix Rosenow, MD
Director, Epilepsy Center Frankfurt Rhine-Main
